

# We make your NI Embedded System cyber secure

Cyber security is becoming increasingly important, especially in a system that needs to be available 24/7.

Did you know that the default settings of a NI-cRIO allows everyone to shutdown the device?

PI Electronics AG offers the following services to mitigate cyber security risks:

## General security

- Regular checks for security issues and advice on updates
- Applying encryption algorithms to measurement data
- Analysis of the existing system and its components
- Correctly configure user access rights
- Set up a firewall and handle ports
- Manage unused NI services

## LabVIEW webserver security

- Secure your web content with a login window
- Configure access rights to individual webpages
- Configure access rights to WebDAV folders
- Create self-signed certificates for your HTTPS connection
- Handle insecure cipher suites and protocols
- Log user access to webpages
